# Cedar Roof Annual Maintenance Program

---

## Why Maintenance is Required

It's important to keep a cedar shake roof clean.

When moss and bacteria are allowed to grow, or if leaves and other debris collect on the roof, they trap moisture and encourage decay, thereby decreasing the life expectancy of the roof.

It's important to remove all overhanging branches and if necessary, trees that encroach on the roof.

For further information, see [fs.usda.gov](http://fs.usda.gov) 'Installation, care and maintenance of wood shake and shingle roofs'.

## What We Do

- Remove all debris that may have accumulated on your cedar roof.
- Spray our specially formulated solution which kills all moss, mold and bacteria.
- Rinse any overspray that may get on windows, siding or other surfaces.
- All work is done from a ladder. We do not walk on your cedar roof.

## Benefits

- With annual maintenance, a cedar roof can reach its maximum life span of up to 35-45 years.
- Improves your home's appearance and curb appeal!
